

DENIS ANTONOV

Sofia, Bulgaria | antonov.denis.srs@gmail.com | linkedin.com/in/antonov-denis-srs | denisantonov.com

TECHNICAL SKILLS

TypeScript, Go, SQL | Node.js, Express.js, React | PostgreSQL, Redis, DynamoDB | AWS, Docker, k8s, Git

EXPERIENCE

Software Engineer

Jul 2025 – Present

Financial Times

- Diagnosed systemic inconsistencies in a department-wide event-driven architecture (inconsistent envelopes, commands modelled as events, duplicate emissions per domain occurrence) and designed a shared library enforcing correct event semantics across producers and consumers, from envelope contracts to idempotent consumption.
- Designed an asynchronous event-driven pipeline for a new capability adopted across six products, spanning publish events, generation and polling workers, and durable state as the source of truth.
- Led a multi-tenant technical-debt initiative replacing a fragmented configuration model with a centralised domain-based one, reducing code by around 3x and setting the convention for later multi-tenant work.
- Proposed and delivered a full platform rewrite, from making the technical-debt case and securing stakeholder alignment through to deployment on new cloud infrastructure.

Software Engineer

Aug 2023 – Jun 2025

Intermedia

- Built the services behind data-intensive platforms, covering ingestion from third parties, normalisation into internal datasets, and data quality work that cut cost downstream.
- Built a staged ranking pipeline that combined independently weighted criteria into a single score.
- Modelled and tuned relational schemas around shifting requirements and growing data volumes.

Business Representative

Apr 2022 – Jul 2023

CluneTech

- Operated cross-border payment workflows for business clients, coordinating transactions totalling up to \$200,000 under documentation and compliance requirements.
- Investigated and resolved payment and service issues with cross-functional teams, building working knowledge of payment operations and reconciliation.

VOLUNTEERING

Mentor

Aug 2024 – Oct 2024

Telerik Academy

- Guided students in building real-life software applications from specifications, advising on architecture, technology choices and implementation quality.
- Shared practical engineering knowledge through code reviews, best-practice discussions and system design guidance.

EDUCATION

University of Ruse

Sep 2024 – Apr 2028

Bachelor's degree in Digital Management and Innovations
